

SEALANT VS PAINT

RZ-Ecoseal

- Waterproof Sealant
- Non – Flammable
- When dry elastic and oil resistant
- Can be used in locations with changing weather conditions.
- Prevents Condensation
- High permeability rating
- Non – Hazardous
- No fumes or odour release
- Thermal conductivity properties
- No mixing of product.
- 10-year life span in grease and central

Paint Alternative

- Paint not a Sealant, therefore it's a thinner layer of coating, also flakes off.
- Tends to require multiple coats
- Cannot with stand changes in weather and climate.
- Struggles to bind to wet/damp walls
- Lets water through if below water level
- Due to its poor durability re-encapsulation is required anywhere between 1-3 years, this results in further costs for the client.
- Does it fix the problem?

What do we provide?

• Training + Support

• Calculation sheet to reduce wastage of product

• Product Guarantee
